

# FLEXIBLE WEB DESIGN TEAM

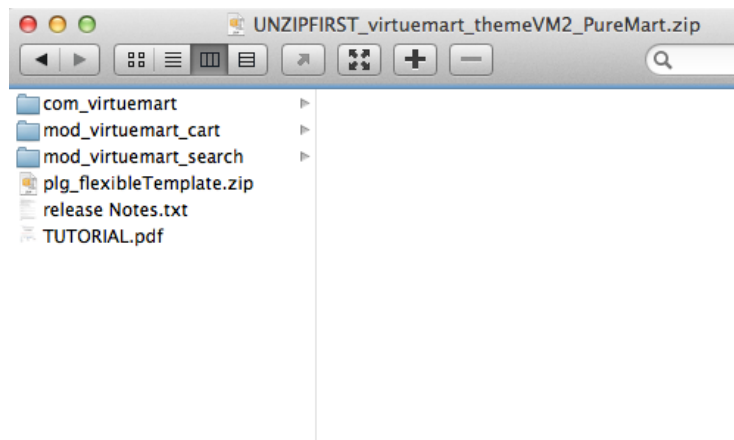

Flexible Virtuemart 2 Template – PureMart (*for VM2.0.x only*)

# TUTORIAL

## INSTALLATION PureMart VM 2 Template (in 3 steps):

### 1. STEP: Explaining the files and folders.

Once you UNZIP the Installation file that you download from our server, you will get 3 folders and 3 files.

**Release Notes.txt** = Includes the Release History. Check the last page of this PDF to see the Release History.

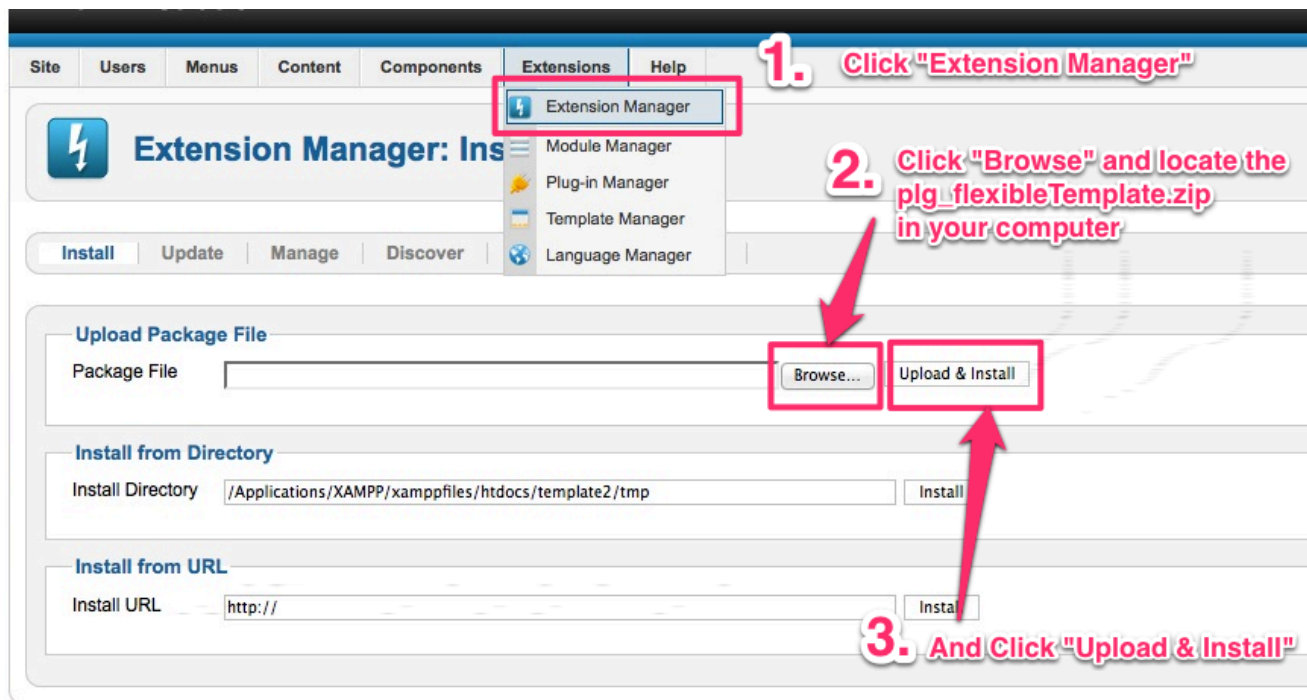

**Plg\_flexibleTemplate.zip** = is the plugin you need to install it to your Joomla. (2. step)

**3 folders** = you are going to upload them to a specific location. It will be explained in (3.step)

**TUTORIAL.PDF** = you are now reading it :)

### 2. STEP: Installing plg\_flexibleTemplate.zip Plug-in to Joomla!

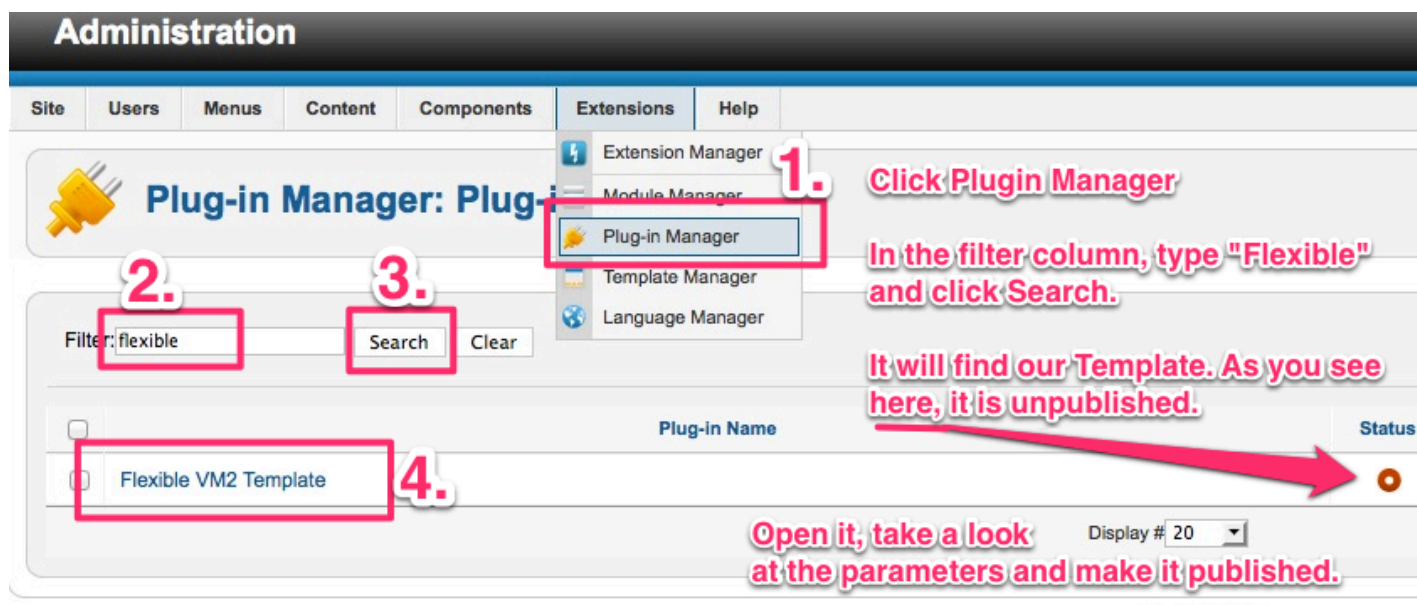

You are going to install it as if you are installing any other Joomla plugin/components or module. Basically through Extension Manager.

When you see this Message, it means the plugin is installed to your Joomla!.

As it's stating there, you need to publish the Plugin.

### 3. STEP: Copying Folders to proper location

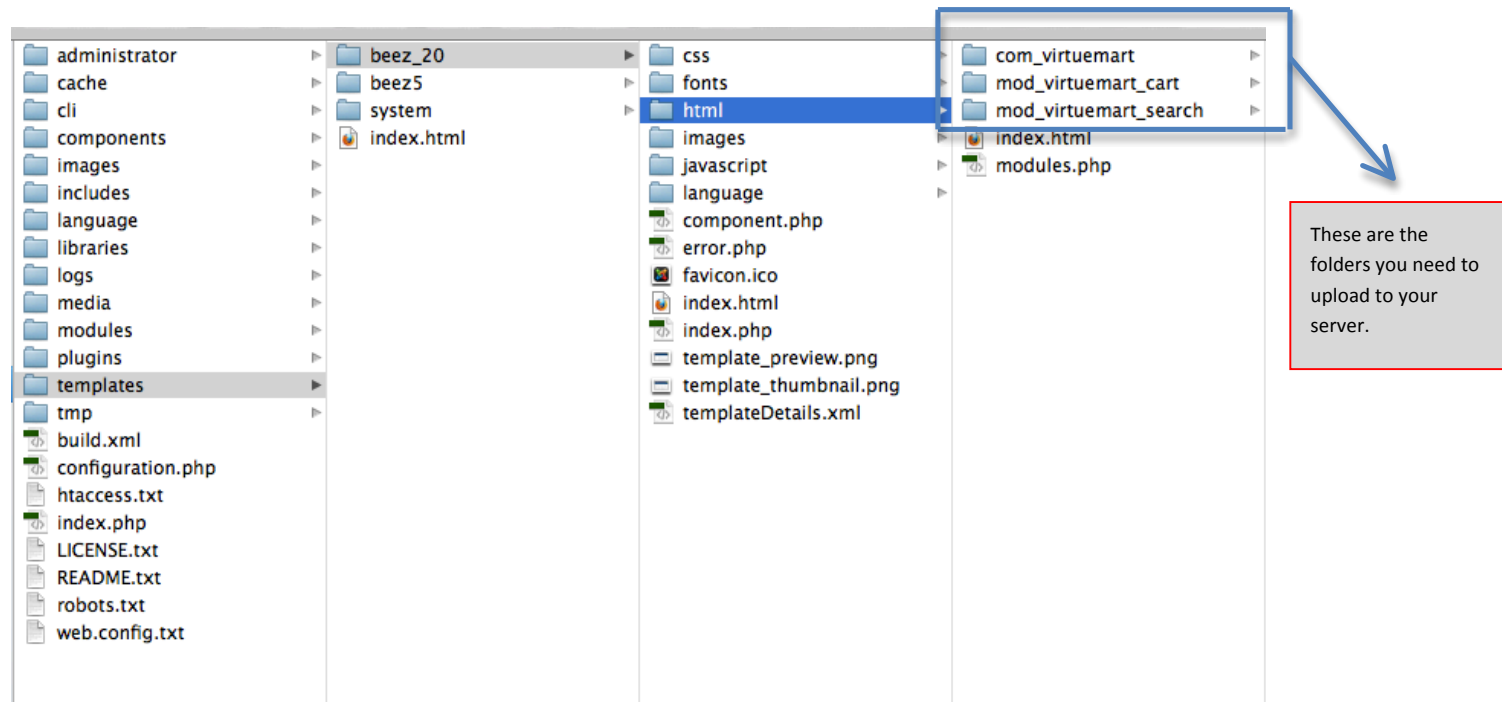

As you remember you got 3 folders (**com\_virtuemart**, **mod\_virtuemart\_cart** and **mod\_virtuemart\_search**).

Please upload this folder to this path in your server:  $joomlaRoot^1/templates/yourTemplate^2/html/$

$joomlaRoot^1$  = is the location where your Joomla is installed.

$yourTemplate^2$  = is the Joomla template folder you are using currently.

Please take a look at screenshot, in our DEMO page, we are using beez\_20 Joomla template, and we have installed those folders to here:

### QUESTION&ANSWER:

Q: Under my HTML folder, there is already a folder called “**com\_virtuemart**”, what should I do.

A: Delete that folder completely, and upload our **com\_virtuemart** instead.

Q: I don't know what Joomla template I am using, or I can't be sure.

A: Browse your Joomla-backend panel. And click **Extensions -> Template Manager**

From below screenshot, find out which Joomla template you are using for “site” location.

Filter:	Search	Clear	- Select Template -		- Select Location -	
	Style	Location	Template	Default	Assigned	IT
<input type="checkbox"/>	Beez2 - Default	Site	beez_20	★		
<input type="checkbox"/>	Bluestork - Default	Administrator	bluestork	★		

Display # 20

Joomla template name

⚠: I found out my template, and browsed that folder, but there is no **HTML** folder in it

⚠: You can create a new folder with the name of **"HTML"** manually.

## The installation is done, Mission Accomplished :)

### Here comes the fun Part: CONFIGURING PureMart:

You have finished the installation already, here comes the fun part. In order to use our theme and Virtuemart itself is expected (or as you see things in our DEMO); there are some important parameters you want to configure. Since VM2 is very new concept and completely different than VM1.1.x, let me explain those important parameters with screenshots one-by-one so everyone can easily understand what those are. Open the Joomla! Back-end and navigate to your Virtuemart Component, then click the "Configuration" link.

1- If you would like have the same Price layout that you see in our DEMO website:  
Which look those below (basically when there is discount, it overrides the old price):

Then you need to enable those pricing parameters below in your Configuration (see the screenshot below). You can select more options (such as: Tax Amount etc..) , but you should **at least** choose these options below:

Shop
Shopfront
Templates
Pricing
Checkout
Products

### Price Configuration

Show Tax in Cart ☒

Show call for price, when the price is empty ☒

Use for swizz CHF the Rappenrundung ☐

Round only display ☒

Display variant prices with tax ☒

### Show Following Prices

Show Prices ☒

	Show Price	Show Label	Rounding Digits
Baseprice	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="2"/>
Baseprice modifier	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="2"/>
<div> <div>Baseprice modifier</div> <div>The modifier of the baseprice due the chosen product variant</div> </div>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="2"/>
Discounted Price without tax	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="2"/>
Salesprice without tax	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="2"/>
Tax amount	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="2"/>
Baseprice with Tax, but without discounts	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="text" value="2"/>
Final salesprice	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="2"/>
Salesprice with discount, but without override	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="2"/>
Discount amount	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="text" value="2"/>
Unit price	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="2"/>

If you would like to change your price labels

**Base price with tax/Base price without tax** to **"List Price"**,

**Sales Price** to **"Our Price"**

**Discount** to **"You Save"**.

The file you need to modify is this:

`yourdomain.com/language/en-GB3/en-GB.com_virtuemart.ini`

*en-GB<sup>3</sup> is for English Virtuemarts. It will be what ever language you currently have for your Virtuemart. For example; for French, it is fr-FR*

In this file; look for the text you want to change, and change the text to what you would like then you are done. This file actually is the translation file for your Virtuemart. You can change any text you would like via this Language file.

For example, you can remove the "No Additional Charge" text from this language INI file that appears in the Custom field attributes.

2- In the configuration section, click “Templates” tab from the header bar, take a look at the screenshot below;

The screenshot shows the 'Shopfront Settings' configuration page. It includes several settings with corresponding callout numbers in red boxes:

- 1** points to the 'Select the default template for your Shop' dropdown menu, which is set to 'Use Joomla default'.
- 2** points to the 'Category Template' dropdown menu, also set to 'Use Joomla default'.
- 3** points to the 'Show Children Category' checkbox, which is checked.
- 4** points to the 'Default number of categories in a row' input field, which contains the value '3'.
- 5** points to the 'Category Layout' dropdown menu, which is set to 'flexv2'.
- 6** points to the 'Product layout' dropdown menu, which is set to 'flexv2'.

Other visible settings include 'Show Manufacturers' (checked), 'Category Layout' (flexv2), 'Default number of categories in a row' (3), 'Product layout' (flexv2), 'Default number of products in a row' (3), 'Default number of manufacturer in a row' (empty), and 'Set the pagination sequence for the List Box' (empty).

Make sure you have the same settings as the screenshot above, which are:

- 1** **Default template for your shop:** Use Joomla Default
- 2** **Category Template:** Use Joomla Default
- 3** **Category Layout:** (VM Template – PureMart comes with 2 different category browse page layout versions, each version includes 3 View options: **ListView**, **GridView**, **MultiGridView**. You can change the Default View (the View option that shows off when visitor open the page) option through Flexilbe VM2 Template plugin. Choose any category layout version that you'd like through Virtuemart Configuration). The category layouts come with our template are: -
  - a. default
  - b. flexV2

*There might be some more in the dropdown list in VM Configuration but only 2 of them come with our template.*
- 4** **Default Number of categories in a row:** 3 *(recommended value is 3, but try and see how it looks like with 2, 4 or even 5)*
- 5** **Product Layout:** (Choose any product details layout version that you'd like through Virtuemart Configuration). The product details page layouts come with our template are:
  - a. default
  - b. flexV2

*There might be some more in the dropdown list in VM Configuration but only 2 of them come with our template.*
- 6** **Number of products in a row:** 3

3- We are still on “Templates” tab, scroll down the page little bit and look at the screenshot below

The screenshot shows the 'Media Files Settings' and 'Activate Css Styles & Javascripts' sections of the VirtueMart configuration interface. Red arrows and numbered boxes (1-4) highlight specific settings:

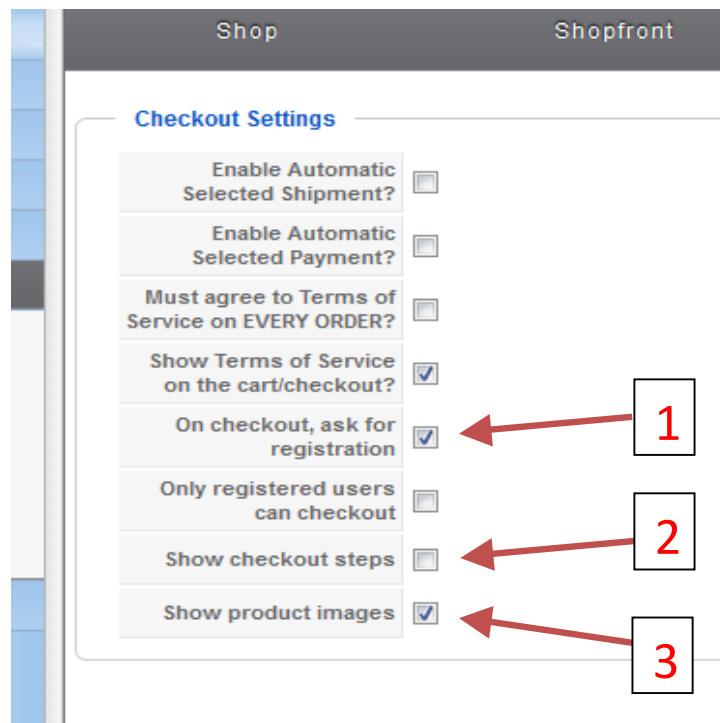

- Box 1:** Points to the 'Enable Dynamic Thumbnail Resizing?' checkbox, which is checked.
- Box 2:** Points to the 'Thumbnail Image Width' input field, set to 200.
- Box 3:** Points to the 'Thumbnail Image Height' input field, set to 200.
- Box 4:** Points to the 'Use Fancybox' checkbox, which is unchecked.

Other visible settings include:

- Type of Product Description: Short Description
- Maximum Description Length: 500
- Assets URL: components/com\_virtuemart/assets/
- Category Media URL: images/stories/virtuemart/category/
- Product Media URL: images/stories/virtuemart/product/
- Manufacturer Media URL: images/stories/virtuemart/manufacturer/
- Vendor Media URL: images/stories/virtuemart/vendor/
- Safe Path: (empty)
- Thumbnail url for media to sell: images/stories/virtuemart/.../resized/
- 'no image' image: noimage.gif
- 'no image found' image: warning.png
- Using the VirtueMart CSS: checked
- Using the VirtueMart jQuery: checked
- Using the product Scripts: checked
- Using the Script ajax Countries / Regions: checked
- Use jQuery chosen for dropdowns in FE: unchecked
- Use external google jQuery library: checked

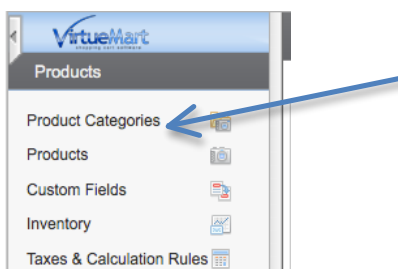

Make sure you have enabled the Dynamic Thumbnail Resizing option. For the best use of our template, you should set your thumbnail size 200px by 200px. Making them too large or too small values might create some weird visual bugs. If you already have uploaded pictures, you have an ongoing website and your thumbnails are larger/smaller than these values, and our template might not look cool (You should give it a try and see how it looks, first) I am afraid you should regenerate your thumbnails with 200x200 again ☹️ Regenerating thumbnail is a tough topic, because just because you change those values, it doesn't mean your thumbnails will be regenerated automatically by itself, only the pictures that you are going to upload from now on will be generate 200x200, the existing pictures must be regenerated manually. Finally, Look at the box number **4** and make sure all you have the EXACT same settings.

4- Now, click the “Checkout” tab and look below for the screenshot:

Make sure you have the same settings, which are highlighted in the screenshot above.

5- Okay, now, you change the category layout from Configuration, but some of your categories or products are tend to use some another layout than what you have chosen. There are 2 places that you should check it out for configuring Category Page and Product Detail page layouts. First; click the link that you see in the screenshot below.

Then click any category from the list (start from the first and check all of them one by one), after you click any of them, scroll down the page little bit and look at the screenshot below:

**Details**

Ordering: 1. Hand Tools

Category Ordering: Top Level Category

Default Number of Products per Row: 0

Category Form Limit List Start: 0

Category Form Limit List Step: 10

Category Form Limit List Max: 0

Category Form Initial Display Records: 10

Category Template: Use shop default

Category Browse Page: No override

Default Product Details Page: No override

Make sure for that particular category “**Default Number of Products per Row**” field is 0, don’t get confused with the 0 (zero). If this field is 0, it means; it will be whatever number you have submitted from the configuration (which we did it in the Step#3). If it is anything rather than 0, then it will be overwritten for that particular category. Also look at the last 3 fields, and make sure they are:

1-User shop default, 2-No override, 3-No override

Also by using the above configuration, you can set a particular Category layout and Product Detail Page layout for particular categories. It is pretty useful if you want to use a different layout for different categories, our template already has 2 different Category and Product layout versions, you can use both of them in a single website for different categories. Anyway, There is one more place that you can change Product Detail Layout (this time only product detail layout, not category layout).

Browse your Product list; And choose one of your products from the list.

English (United Kingdom)

### Product Information

Published? ☐ No ☒ Yes

### Parent & Child Products

Detail page will be used for only for this particular product. So it doesn't matter, what you have chosen from configuration or categories sections. If you change this field to something rather than "no override", it means it is final and this layout will be used (of course only for this specific product).

People have asked this so many times, I should mention about it; The shipment icon that you see in our DEMO, that says: 1-2 days, 24 hours, 3-5days shipping.. etc. they appear only if you select any of them. While you are in the product edit page. (the screenshot above was taken from "product edit page"). Click the "Product Status" tab.

### Product Information

### Product Description

★★★★★

And select a Shipment Icon from this dropdown box. Than the icon will start appearing in the product detail page. (For this specific product)

## Creating SPECIFICATION TAB IN product details page

**Citizen Men's Test1** < PREV | NEXT >  
SKU: SKU555

DESCRIPTION BRAND **SPECIFICATIONS**

**Material:** Stainless Steel  
Leather

**Case Size:** 38mm

**Thickness:** 10mm

**Stone Count:** 60 clear stones

**Band Width:** 18mm

**Circumference:** 190mm (+/- 5mm)

**W-Resistant:** 5 ATM

**Closure:** Buckle strap

**Brand:** Citizen

**Origin:** Imported

**Warranty:** 11-year limited

< > ENLARGE IMAGES

Specifications TAB

You should create non-cart attributes. And they will be listed as "Specifications" in the product details page. To create Non-Cart Custom Attribute, you should submit "ontop" to "layout position" field while you are creating the custom field:

**Custom Field**

Custom Field Type: String

Title: Material:

Published: ☐ No ☒ Yes

Parent: Please Select

Cart Attribute: ☒ No ☐ Yes

Description:

Default:

Tooltip:

Layout position: ontop

Admin only: ☒ No ☐ Yes

Is a list?: ☒ No ☐ Yes

Hidden: ☒ No ☐ Yes

Select, NO to create Non-cart attribute.

Type: ontop to "layout" field.

basically you are going to do it for all specification parameters you are going to create (materials, warranty etc..).  
then browse any product, add those custom fields and submit values for them.

Custom Field Type:

Watch Band

Title	Tooltip	Value	Price	Type	Cart Attribute	Delete
Specifications				Parent	★	✖
Material:		<input type="text" value="Metallic/Leather"/>		String	★	✖
Case Size:		<input type="text" value="30mm"/>		String	★	✖
Thickness:		<input type="text" value="11mm"/>		String	★	✖
Stone Count:		<input type="text" value="44 clear stones"/>		String	★	✖
Band Width:		<input type="text" value="14mm"/>		String	★	✖
Circumference:		<input type="text" value="175mm (+/- 5mm)"/>		String	★	✖
W-Resistant:		<input type="text" value="5 ATM"/>		String	★	✖
Closure:		<input type="text" value="Butterfly buckle"/>		String	★	✖
Brand:		<input type="text" value="Fossil"/>		String	★	✖
Origin:		<input type="text" value="Imported"/>		String	★	✖
Warranty:		<input type="text" value="11-year limited"/>		String	★	✖

You don't need to do anything for Checkout steps/shopping cart and virtuemart login page design, They will be changed by itself.

Thanks for buying.
